PROFESSIONAL SUMMARY

Final-year B.Tech (IT) student at Parul University with hands-on experience in cloud security tooling, data analytics, and full-stack development. Built an AWS IAM misconfiguration scanner with automated risk scoring and blast-radius mapping, and completed a data analytics internship at Inovexia covering supply chain, fintech, and ride-hailing datasets. Strong foundation in Python, AWS fundamentals, SQL, and Linux. Seeking an entry-level cybersecurity role with a cloud security focus to apply this experience and grow quickly in a professional environment.

SECURITY PROJECTS

IAM Misconfiguration Scanner — AWS Cloud Security Audit Tool *Python · boto3 · NetworkX · Streamlit · pytest*

- Built a Python tool that audits AWS IAM configurations via boto3 — collecting users, roles, policies, trust relationships, MFA status, and access key age — and runs them through a custom rules engine.
- Implemented 6 detection rules (wildcard permissions, privilege escalation, permissive trust policies, missing MFA, stale access keys, inline policy overuse), each mapped to a MITRE ATT&CK technique and severity level.
- Built a weighted risk-scoring model and NetworkX-based "blast radius" graph visualizing what an attacker could reach if a given identity were compromised, including one-hop role assumption chains.
- Delivered a Streamlit dashboard and auto-generated PDF executive reports; validated core logic with 22 passing unit tests across rules, scoring, and graph generation.

HoneyShield — Deception-Based Security Visualization Platform *React · Vite · Tailwind CSS · Three.js · Node.js/Express · Recharts*

- Built a honeypot simulation platform with separate Admin and Attacker-facing dashboards to visualize deception-based security monitoring concepts.
- Implemented real-time visitor fingerprinting (IP, geolocation, browser, OS, device type) using geoip-lite and ua-parser-js on every session.
- Built an interactive 3D global threat map (Three.js / React Three Fiber) to visualize simulated attack origins, plus analytics dashboards (Recharts) for session and risk trends.

INTERNSHIP — DATA ANALYST, INOVEXIA

7th-semester internship covering three end-to-end analytics projects across logistics, fintech, and ride-hailing data.

OLA Ride Insights *Python · Pandas · MySQL · SQL · Streamlit*

- Cleaned and structured 103,000+ OLA ride-hailing records (20 fields: booking status, vehicle type, ratings, revenue) with Pandas, then imported into MySQL.
- Wrote SQL queries covering booking trends, revenue by payment method, cancellation causes, and driver/customer rating comparisons; presented findings in a Streamlit dashboard.

FedEx Logistics EDA — Supply Chain Analysis *Python · Pandas · Matplotlib · Seaborn · Plotly*

- Ran exploratory data analysis on 10,324 supply chain shipment records (33 columns) across countries, shipment modes, and vendors, producing 21 charts (univariate, bivariate, multivariate).
- Surfaced key findings: air freight dominates 59% of shipments despite higher cost, and Sub-Saharan Africa receives 80%+ of shipment volume.

PhonePe Pulse Dashboard *Python · Streamlit · Pandas · Plotly · GeoJSON*

- Built an interactive dashboard visualizing PhonePe digital payment transaction data across India, including a state-level choropleth map and year/quarter/transaction-type filters.
- Added transaction-type distribution charts and user analytics by device brand, with KPIs for total transaction count and value.

TECHNICAL SKILLS

Security: IAM Auditing · Risk Scoring · MITRE ATT&CK Mapping · OWASP Top 10 · Deception Systems · Nmap · Wireshark · Burp Suite · Metasploit · OWASP ZAP

Cloud: AWS Core Services (IAM, EC2, S3, CloudWatch) · Cloud Security Fundamentals · Linux Administration

Languages: Python · JavaScript · SQL · Bash (scripting basics)

Data & Web: Pandas · Streamlit · Plotly · Matplotlib · Seaborn · MySQL · React · Node.js/Express · REST API Design · GeoJSON

Tools: Git · GitHub · Postman · VS Code · Linux CLI

Soft Skills: English (B2 Professional) · Self-Directed Learning · Problem Solving

EDUCATION

B.Tech — Information Technology

Parul University, Vadodara, Gujarat | Expected: May 2027 | CGPA: 7.02 / 10

Key Coursework: Cybersecurity · Network Security · Cloud Computing · Web Development (MERN) · Artificial Intelligence · Database Management · Operating Systems

Open to Cybersecurity Internships · Entry-Level Cloud Security Roles · Remote Opportunities
